## German Collection of Microorganisms and Cell Cultures

DSMZ - Deutsche Sammlung von Mikroorganismen und Zellkulturen GmbH (German Collection of Microorganisms and Cell Cultures) is an independent, non-profit organization dedicated to the acquisition, characterization and identification, preservation and distribution of Bacteria, Archaea, fungi, plasmids, phages, human and animal cell lines, plant cell cultures and plant viruses.

**Customer Opinion Poll (Kundenumfrage)** 

Please take a few minutes to complete our annual survey. Your comments will help to improve the quality of our services and to expand our product range.

We greatly appreciate your participation, thank you very much in advance for responding. To participate please click here.

Kundenumfrage N customer O opinion 4 poll

Research and Training at a Culture Collection financed by the EC

As a Large Scale Facility recognized by European Commission within the Framework of the "Human Potential Programme - Access to Infrastructures" the DSMZ offers facilities for research and/or training. Grants are available to scientists from member states of the European Union (excluding Germany) and Associated States.

More information here.

New: The most comprehensive <u>myxobacteria</u> (<u>Myxococcales</u>) <u>collection</u> world-wide.

Cell line

ΥT

Cell type

human T/NK cell leukemia

DSMZ No

ACC 434

Origin

established from the pericardial fluid of a 15-year-old man with lymphoblastic leukemia (ALL) at relapse (with accompanying thymo were described as: (i) showing NK activity and ADCC (antigen-dep cell-mediated cytotoxicity), (ii) having their T cell receptor ( germline configuration, and (iii) expressing no TCR proteins (al

CD56+, CD57-)

DSMZ Cell Culture Data

Morphology

round to polygonal cells growing singly or in clumps in suspensi

80% Iscove's MDM + 20% FBS

Subculture

Medium

split saturated culture 1:2 every second day; start culture in a seed out at ca. 0.8-1.5 x 106 cells/ml, initially after thawing be reduced down to ca. 20-50% during the first 1-2 weeks (durin period, cells should not be diluted, medium may be exchanged wit centrifugation); in their vigorous growth phase, maintain at 0.2

cells/ml; maximal density at ca. 0.6-0.8 x 106 cells/ml

Incubation

at 37 °C with 5% CO<sub>2</sub>

Doubling time

doubling time of ca. 40-50 hours

Harvest

cell harvest of ca.  $0.6 \times 10^6$  cells/ml

frozen with 70% medium, 20% FBS, 10% DMSO at about 4 x 106 cells. Storage

DSMZ Scientific Data

Mycoplasma Immunology negative in DAPI, microbiological culture, RNA hybridization, PC CD2-, CD3-, CD4-, CD5-, CD6-, CD7+, CD8-, CD13-, CD19-, CD25+, C

TCRalpha/beta-, TCRgamma/delta-

Fingerprint Species

multiplex PCR of minisatellite markers revealed a unique DNA pro

confirmed as human with IEF of AST, LDH, NP

Cytogenetics

human flat-moded near-tetraploid karyotype with 12% polyploidy;

-9, -15, -19, +6-8mar, der(X)t(X;7)(q25;q21),

Viruses

ELISA: reverse transcriptase negative; PCR: EBV+, HBV-, HCV-, HH

HTLV-I/II-
